# PERFORMER

**Play Laser show cues live, using a professional console:**

The "Performer" is designed to work with the Lasershow Designer and Lasershow Designer 2000 programs, and is an extension of the software-only Live and LivePro! embedded controllers.

The LP console is perfect for environment such as discotheques and concerts, or those who prefer playing from a dedicated "desk" rather than a computer keyboard.

**Play to beats or from audio**

You can sit back and relax with three ways to have The "Performer" "perform" all by itself!

**Microphone:** The "Performer" includes a built-in microphone that responds to the bass beats of music. Simply put it into the audio mode, then select "Next" or "Random" mode to choose how the console changes new cues on music beats.

**Audio:** This works the same as Microphone mode, but using an RCA line-in jack to bypass the internal mic. In noisy environments, this ensures that only the music will trigger a cue.

**Timed:** You select Timed mode, tap keys to establish the beat of the music, and then The "Performer" will continue at that rate.
